

## **ASP.NET Assignment**

### **Assignment:**

Develop a web application which will allow user to

1. register to site
2. login to the site using registered id and password
3. retrieve passwords based on email id

### **Requirement:**

1. Registration Page:  
This page should allow user to register to the site. The registration module should validate user's data.
2. Login Page:  
This page should allow user to login to the site using valid login credentials.
3. Retrieve Lost Password Page:  
Only valid users should be able to retrieve passwords through email.

There are two types of users:

1. Admin:  
Admin can activate and deactivate. When Admin logs in to the site he/ she should be redirected to user management page. Admin can modify its personal details, also he/ she can update password in account details section.
2. User:  
User can login and logout. When User logs in to the site he/ she should be redirected to a welcome page. User can modify its personal details, also he/ she can update password in account details section.

### **Note:**

1. Data should be stored in database
2. Make use of LINQ for manipulating database results.
3. All database queries should be written stored procedures.
4. Make use of membership
